About GENOFARMS

GENOFARMS has extensive breeding experience globally, delivering innovative Cannabis genetics for both hemp and medicinal marijuana varieties.

GENOFARMS genetics are sourced and selected from the purest strains globally and are tailor-made to ensure optimal quality with the highest efficacy.

Combining entrepreneurship as well as deep industry knowledge, scientific and technical expertise, GENOFARMS has an ambitious vision for the potential of the Cannabis plant and its ability to create meaningful advances in social, health and environmental impacts.

To ensure GENOFARMS consistently delivers the highest quality products to the rapidly growing and increasingly discerning market, we create well structured varieties that have special rarities and colourful polychromes, creating truly unique compounds that maximise our clients' desired goals.

GENOFARMS genetics are made from a truly composite gene pool which provides stable varieties of land race strains, purebred plants, elite clones and hybrids.

GENOFARMS looks forward to collaborating and working together to deliver solutions for both our existing and new Partners.

At GENOFARMS, we have a team of people with over 40 collective years of passion, experience within the Cannabis / Hemp industry breeding & growing. We also have extensive knowledge with Hydroponics equipment.

We are very meticulous when it comes to selecting our strains, it takes years for us to search for the perfect phenotype. Once the correct phenotype has been chosen we then spend a few more years stabilizing the genetic before we release it.

Our lead breeder Prof Z, was one of the first people in the world to stabilize feminized seeds. We have sourced many old skool landrace genetics from around the world, making our genetics library the most desirable in the world.

GENOFARMS genetics are constantly tested to ensure they perform in extreme temperature conditions and maintain uniform results.

AMNESIA HAZE | VERY HIGH THC

Complex Cannabis flower terpene profiles

Outdoor per plant: 900g
Indoor per plant: 700g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 70%
Indica: 30%
CBD: 0.2%
THC: 21%
Height: 200cm
Flowering: 65 - 70 days

A popular strain from Holland, it was regarded as one of Amsterdam's classics and most favored strains.

Its lineage derives from South East Asian.

It has earthy flavors, with a hint of citrus and lemons.

This sativa-dominant hybrid yields large, heavy buds in a 10- to 12-week timeframe. Dripping with resinous THC buds.

CANDY LAND | VERY HIGH THC

This strain grows well indoors and outdoors

Outdoor per plant: Up to 992g
Indoor per plant: 550g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 70%
Indica: 30%
CBD: 0.24%
THC: 21.16%
Height: 30 - 78cm
Flowering: 50 to 55 days

Predominately a sativa based strain, we selected the best Granddaddy Purple and the legendary Platinum Girl Scout Cookies from our library and set about breeding our own version of Candyland.

The combination of those two remarkable plants provide a stimulating high that spurs creativity and provides energy for everyday tasks.

Candyland has a strong sweet flavor and smell, with a very spicy yet earthy underlying taste.

BLUEBERRY HEADBAND | HIGH YIELD

'76 Blueberry X Emerald OG X Cali Sour D X Pre '98 Bubba

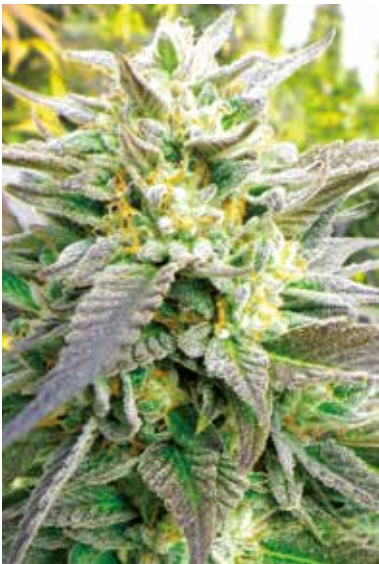

Outdoor per plant: 1000-4000g
Indoor per plant: 450-600g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 50%
Indica: 50%
CBD: 0.18%
THC: 21.52%
Height: 300cm
Flowering: 65 - 70 days

This super high yielder, known for its vigorous veg growth and tight internodal stacking will produce long, large colas.

Blueberry Headband has heavy diesel overtones with sweet berry undertones, with the Pre-98 Bubba providing a peppery bite.

This plant has a quicker finish than the other strains within this mix.

This strain is highly resistant to mold, mildew and PM.

CHEESE | 100% PURE INDICA

Origins from 1980s, Cheese is said to descend from a Skunk #1

Outdoor per plant: 800g
Indoor per plant: 500g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 0%
Indica: 100%
CBD: 0.10%
THC: 16.51%
Height: 200cm
Flowering: 65 - 70 days

Cheese is an indica-dominant hybrid from the U.K. that has a unique flavor and pungent smell.

When given enough light and room to flourish, Cheese strains can exceed 200cm in height. If growing indoors, make sure you have enough space.

Similarly, the ScrOG (screen of green) method can help optimise bud potential.

CRITICAL BILBAO | VERY HIGH THC

Dense and heavy buds that needs supporting

Outdoor per plant: 900g
Indoor per plant: 500g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 30%
Indica: 70%
CBD: 0.46%
THC: 21.75%
Height: 250cm
Flowering: 45 to 50 days

Critical Bilbao is a powerful indica-dominant strain.

A legend among Spain's cannabis consumers, Critical Bilbo's resinous, sage-green buds emit a sweet, fruity aroma. Its effects are heavy and narcotic, a top-shelf strain oftentimes too intoxicating for novices.

Because of the medium height, the Critical strain is also suitable to be grown in a SOG (Sea of Green).

LEMON SKUNK | HIGH YIELDER

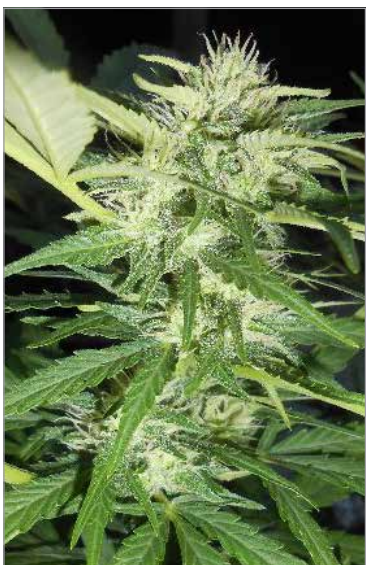

Skunk that has an intense Lemon aroma and flavor

Outdoor per plant: 1200g
Indoor per plant: 800g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 60%
Indica: 40%
CBD: 0.14%
THC: 22.24%
Height: 120-150cm
Flowering: 50 to 56 days

Lemon Skunk weed is slightly sativa dominant and is a cross of a pair of Skunk phenotypes which when married together produce a variety of Skunk that has an intense Lemon aroma and flavour. The nugs are fairly dense and have a light yet intense green colour with a light green tinge to the leaves and buds. The flowers have bright orange pistils and once dried the flowers are extremely fragrant.

This varietal is particularly good for chronic pain. If you need help sleeping, consume a larger dosage.

DIESEL | VERY HIGH THC, SATIVA

Citrus-diesel flavor and aroma. Diesel cannabis is easy to cultivate

Outdoor per plant: 950g
Indoor per plant: 475g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 70%
Indica: 30%
CBD: 1.86%
THC: 23.17%
Height: 300cm
Flowering: 60-70 days

Diesel is a Sativa cannabis strain which is a New York native that became best selling variety in US and gave rise to many varieties such as Sour Diesel etc.

The key characteristic of this strain is the citrus-diesel flavor and aroma. Diesel cannabis is easy to cultivate and has mild THC levels. The buds are very large, tight, dark green in color with bright orange hairs and large crystals.

It is good for combatting anxiety and depression and any mental type of trauma.

MEDI-CRITICAL | HIGH PRODUCER

Sweet, fruity critical flavor, full of resinous buds

Outdoor per plant: 900-1100g
Indoor per plant: 400-600g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 70%
Indica: 30%
CBD: 11.51%
THC: 5.68%
Height: 120 - 280cm
Flowering: 50 - 55 days

These generous plants are full of fragrance and resin coming from the Critical side, but also have a rapid bloom and high production.

Due to its early harvest and the fact that it is easy to cultivate outdoors, this is a good choice for users interested in medicinal the medical effect of cannabis.

Medicritical will be the favorite for lovers of the sweet, fruity Critical flavor.

Use the best medium and fertilizer available.

MEDI FLAKE | FULL OF TERPENES

Mediflake is easy to grow but it really thrives with abundant light

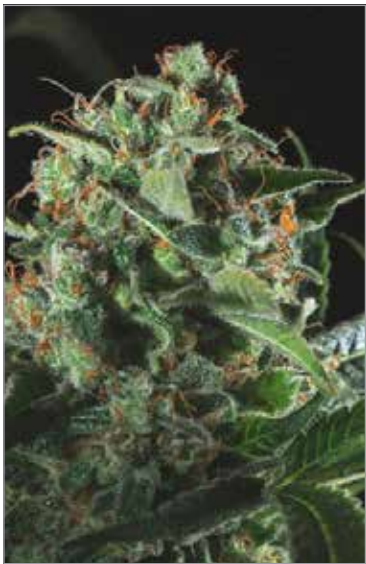

Outdoor per plant: 550-1400g
Indoor per plant: 450-500g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 70%
Indica: 30%
CBD: 6.31
THC: 5.03%
Height: 95-140cm
Flowering: 60-65 days

Mediflake's buds are hard as rocks & full of resin. It smells like incense-like, but with the suave and soothing effect CBD.

The 9-10 weeks of flowering are recompensed with dense flowers heavy in terpenes and cannabinoids.

Mediflake is easy to grow but it really thrives with abundant light, above all in the first weeks of flowering. It's a variety that tends to grow quite tall so it is recommendable to switch to 12/12 shortly after germination.

ROYAL PURPLE KUSH | HIGH THC

High cannabinoid levels provide a stonier punch than your average purple

Outdoor per plant: 800g
Indoor per plant: 500g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 15%
Indica: 85%
CBD: 0.21%
THC: 17.56%
Height: 180-200 cm
Flowering: 55-60 days

Indicia dominant with vigorous vegetative growth allows for a hearty infrastructure, resulting in multiple large, fragrant, THC-encrusted "castle" colas.

You can veg it longer than most plants, as it only stretches about 15-25% after entering the flowering cycle.

You can enhance the plant's purple coloring by dropping the temperature or feeding with gradually colder water in the last weeks of flowering (indoor or outdoor).

OLD TESTAMENT | VERY HIGH THC

Powerful Indica dominant strain is one of the heaviest hitters you will find

Outdoor per plant: 950g
Indoor per plant: 650g/m²
Germination Rate:
Feminization Rate: 99.9%
Sativa: 30%
Indica: 70%
CBD: 0.144%
THC: 29.5%
Height: 200cm
Flowering: 50-60 days

This powerful Indica dominant strain is one of the heaviest hitters you will find regarding its THC content, running at 29% outdoors this strain will be in the low to mid 30's the content grown correctly indoors or in greenhouses.

A large plant that produces a heavy dense bud is perfect for commercial production as it has a high mould resistance as well as its intense sweet fruity aroma.

To view all lab reports, click on link: <https://drive.genofarms.com/index.php/s/kaGzPxSdViCsG3t>

SCBDX | BIG PRODUCER, HIGH CBD

The greater the access for root development, the larger the potential

Outdoor per plant: 800g
Indoor per plant: 500g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 60%
Indica: 40%
CBD: 17%
THC: 0.77%
Height: 250cm
Flowering: 50 - 65 days

SuperCBDx is a large hardy plant, it will need netting as it gets tall, big and bushy.

It will produce a minimum of 50% more CBD than any CBD photo period plant.

Every SuperCBDx seed will produce a genetic duplicate, 17 +% CBD, with CBD/THC ratios of 24-26:1, with no psycho activity.

To view all lab reports, click on link: <https://drive.genofarms.com/index.php/s/VBMX7WPXMDum5y7>

PLEASE NOTE: Results may vary based on farming experience and environmental conditions.

SNOWFLAKE | HIGH THC

Powerful and resinous, this plant has large trichomes.

Outdoor per plant: 300-2000g
Indoor per plant: 400-550g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 70%
Indica: 30%
CBD: 0.17%
THC: 18.84%
Height: 50-120CM
Flowering: 65-70 DAYS

This plant tends to have long hard buds developing from vigorous shoots; it is ideal for the Screen of Green method.

We recommend the use of netting due to its explosive growth and the structure of the plant.

As the flowering progresses and the flowers gain weight because of the huge trichomes that Snowflake produces, it is possible that some of the branches may double or even break.

To view all lab reports, click on link: <https://drive.genofarms.com/index.php/s/HTNTPJtdrkRJutU>

SOMANGO | HIGH THC

The plant is quite hardy and is considered to be quite easy to maintain.

Outdoor per plant: 800g
Indoor per plant: 575g/m²
Germination Rate: 98%
Feminization Rate: 99.9%
Sativa: 25%
Indica: 75%
CBD: 0.21%
THC: 11.76%
Height: 120 - 280cm
Flowering: 66 days

Somango (formerly known as Soma #5) is an indica cannabis strain that derives its name from its mango-like aroma. Its flavor is similar, being reminiscent of fruits and the tropics. Its buds have amber pistils and are a light green in color.

Despite its tendency to be enduring, its penchant for growing in a compact manner coupled with the massive size of the buds creates a dense foliage that must be given special care.
